

Adding Functionality with JavaScript

Carlos Saloio

WEB DEVELOPER

csaloio1@yahoo.com www.codedark.xyz

Handling Events

“When a function is called as a method of an object, its *this* is set to the object the method is called on.”

Mozilla Developer Network

“When a function is used as an event handler, its *this* is set to the element the event fired from.”

Mozilla Developer Network

[Ctrl] + [Back Quote]
Advantages:

Won't type a character into a control
Difficult to trigger by accident

Writing Output

Processing Commands

Implement a command history

Move input text to output element

Process submitted command

Graphical Output

You Are Not Limited to Text

Images

Any image format supported by browsers.

SVG

Scalable Vector Graphics for charts or drawings.

Video

Any video format playable by browsers.

Keep things simple where
you can.

Sending Server Commands

Sending a Server Request

Library
3rd party library or
framework.

XHR
Old school
XMLHttpRequest.

Fetch
A modern XHR
alternative.

Promise

An object that represents an operation that hasn't completed yet.

Summary

Handled keyboard and mouse events

Wrote output functions

Implemented CLS and history

Output rich content

Wrote code to send commands to server
